

P-TRACKER

AND JAVA

Interested in tracking Java in Unix System Services?

P-Tracker records Java program executions:

- in z/OS batch, USS, and CICS;
- which Java archives actually are being used?
- which Java archives lounge around, unemployed and obsolete?
- which application uses what Java archive, on which system and how often?

P-Tracker is the high performance tool that recognizes and documents each program execution. P-Tracker provides a multitude of valuable meta data around program executions. P-Tracker is the user-friendly solution for application developers and testers who want to know what really goes on in their environments.
